

TRICKS Engineering Vault

1988 Toyota Land Cruiser HJ61 GX — resto-mod build

Table of contents

| | | |
|----------|-------------------------|----------|
| 1 | Render set | 1 |
| 2 | Building locally | 1 |

This site is the rendered face of the TRICKS engineering vault — the architecture decisions, 1D system models, and design records behind the HJ61 build.

It is produced by the Quarto publishing layer adopted in [ADR-098-Quarto-Publishing-Layer](#), rendering the vault’s markdown sources in place. The toolchain underneath is set by [ADR-075-1D-Modelling-Toolchain](#).

This is the initial scaffolding landing page (C-078). The first real content page — the ORC Architecture A vs B+ comparison study — is authored separately and added to the render set in `_quarto.yml` once it exists.

1 Render set

Pages are added to this site **explicitly**, one at a time, via the `render:` list in `_quarto.yml`. Scope expands deliberately — never by glob — so an in-flight wikilink elsewhere in the vault cannot break the build.

2 Building locally

See `Docs-Site/README.md` for local build instructions.
